                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the Staphylococcus enterotoxin B (SEB) super antigen (SAg). Mutant versions of this sequence generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular Vbeta types. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preventing or treating toxic effects of super antigens - by admin. new modified or mutated super antigen which induces antibodies but not T-cell activation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
  The sequences given in AAR41990-2013 are mutant versions Staphylococcus enterotoxin B (SEB) super antigen (SAg).
                                                                                                Preventing or treating toxic effects of super antigens - by admin. of new modified or mutated super antigen which induces antibodies but not T-cell activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Region

                                            The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus; enterotoxin B; random mutation; PCR; modify;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                       Preventing or treating toxic effects of super antigens - by adr
new modified or mutated super antigen which induces antibodies
                                                                                                                                                                                                                                                                                                                                                        05-AUG-1993.

                                                                                                                                     The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Staphylococcus; enterotoxin B; SEB; super antigen; SAg; receptor; random mutation; PCR; modify; T-cell; response; antigen; Vbeta el

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutantion by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Preventing or treating t

This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAq that bind to never the total response may be useful may be activated by SAq that bind to never the total response may be activated by SAq that bind to never the total response may be activated by SAq that bind to never the total response mutative T-cells may be activated by SAq that bind to never the total response mutative T-cells may be activated by SAq that bind to never the total response mutative T-cells may be activated by SAq that bind to never the total response mutative T-cells may be activated by SAq that bind to never the total response mutative T-cells may be activated by SAq that bind to never the total response mutative T-cells may be activated by SAq that bind to never the total response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell response mutative T-cell respons

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                   Staphylococcus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      generated by random mutation by PCR, may be used to modify the T-cel response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular vbeta types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preventing or treating toxic effects of super antigens - new modified or mutated super antigen which induces antil not T-cell activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Staphylococcus; enterotoxin B; SEB; super antigen; SAg; receptor; random mutation; PCR; modify; T-cell; response; antigen; Vbeta el

                                                                                                                  The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                              Sequence
                                                                                                                                                                                                                        Preventing or treating toxic effects of super antigens - new modified or mutated super antigen which induces antik not T-cell activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                    The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                   Preventing or treating toxic effects of super antigens - by adn new modified or mutated super antigen which induces antibodies not T-cell activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-AUG-1993.

These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Preventing or treating toxic effects of super antigens - by adr
new modified or mutated super antigen which induces antibodies
not T-cell activation

These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Preventing or treating toxic effects of super antigens - by admin. new modified or mutated super antigen which induces antibodies but not T-cell activation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
Kappler JW,
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus

These mutar generated by random mutation by PCR, may be used to modify the T-cel response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Preventing or treating toxic effects of super antigens - by admin. new modified or mutated super antigen which induces antibodies but not T-cell activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutar generated by random mutation by PCR, may be used to modify the T-cel response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular

                                                                                                    The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                             Region

These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Fig 3; 54pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Preventing or treating toxic effects of super antigens - by admin. new modified or mutated super antigen which induces antibodies but not T-cell activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Staphylococcus; enterotoxin B; SEB; super antigen; SAg; receptor; random mutation; PCR; modify; T-cell; response; antigen; Vbeta element;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequences given in AAR41990-2013 are mutant versions of the Staphylococcus enterotoxin B (SEB) super antigen (SAg). These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-receive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Preventing or treating t

These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular

These mutants generated by random mutation by PCR, may be used to modify the T-cell response elicited by an antigen, by interacting with specific Vbeta elements of the T-cell receptors. This T-cell response modulation may be useful in a wide variety of autoimmune diseases, where self-reactive T-cells may be activated by SAg that bind to particular
                                                                                                                                                                                                                                                                                                               Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

20-FEB-2001;
22-AUG-2001;
The invention relates to constructing (MI) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifyione allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous promoter, so that expression of the second allele is regulated by the promoter. (MI) is useful for constructing a strain of diploid fungal
                                                                                                                                                                                                                                                                                                                                                 Fungus; yeast; tetracyclin; promoter; GRACE strain; biosynthesis; signal transduction; DNA replication; cell division; growth; proliferation; Candida albicans; fungicide; antifungal.
                                                                                                                                                                                                                                                                                                                                                                                                              30-JAN-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ភភពពិភពពិភពពិភពពិភពពិភពពិភព
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC cells in which both alleles of a gene are modified. The diploid fungal CC is essential to the survival or growth of a fungus, a gene that CC contributes to the virulence and/or pathogenicity of a fungus, a gene that CC contributes to the virulence and/or pathogenicity of a fungus, a gene CC that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus CC and for identifying a therapeutic agent for treatment of a mammalian CC disease. (M1) is useful for identifying a compound which modulates the CC activity of a gene product, preferably enzymatic activity, carbon CC compound catabolism, biosynthetic, transporter, transcriptional, CC translational, signal transduction, DNA replication and cell division CC activity. The method is useful for identifying a compound having the CC ability to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of an CC essential Candida ablcans protein used in the method of the invention. CC Note: The sequence data for this patent is not represented in the printed CC specification but is based on sequence information supplied to Derwent by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-DEC-1990;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence. It encodes AAs 1255-1456. The primary structure of Fn contains three different types of internal repeats known as homology Types I.II and III. A site contg. the Arg-Gly-Asp (RGD) sequence in the 10th Type III repeat of Fn is known to be involved in cell adhesive events. The Fn peptides of the invention bind to integrin receptors, particularly GPIIb-IIIa, at a site which is independent of the RGD sequence. The new binding site is located at least fifty AAs upstream of the RGD sequence (see AAR24782). The claimed peptides are 100 AAs or less (see AAR24782). The claimed peptides are 100 AAs or less (see AAR24783, R24795). AAR24796 comprises a peptide of formula B-X-Z, where X is Fn AA residues 1351-1456, B is an NH2 gp. or N-terminal sequence of amino acids, and Z is a residues of the RGD sequence of amino acids no more than 150
                                                                                                                                                                                                                                                                                                                                           EP1078985-A2

```

The present invention relates to a derivative of plant mitogen-activated

Proteins AAW02657-W02720 represent a range of G-protein coupled receptor (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine, adrenergic, thrombin, endochelin, bombesin, endocrine, rhodopsin, opsin, odorant, cytomegaloviral and other GPR proteins. The peptides AAW03578-W03651 represent the N-terminal fragments of the above proteins. The receptor proteins were used to design polypoptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor

coupled receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mutagenesis of a core phosphorylation site of a member of MAPK cascade create permanently active forms, which stimulate both pathogen- and wound- inducible genes when introduced into plant cells. The MAPK gene is useful for increasing disease resistance or enhancing stress tolerance in a plant, preferably tomato or Bonny Best. The MEK gene is introduced into the plant by transformation or particle bombardment. The present sequence is Dictyostellum discoideum, DOMEKI protein. This sequence is a member of mitogen-activated protein kinase kinase
                                                                                                                                                                                                   Murphy RB,
                                                                                                                                                                                                                                                                                                                                                                                                                    muscarinic

The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding a GPR (see AAW02747-W0299) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.

                                                                                                                                                                                                                                                                                                       The present invention describes fusion proteins (I) comprising at least part of a major outer membrane protein (MOMP) of Chlamydia trachomatis, at least one hydrophilic polypeptide having no immunoreactivity to human serum and their connected part. AAA08120 to AAA08125 encode specifically claimed examples of the fusion proteins given in AAY82388 to AAX82393. Also described is a method (A) for the detection of Chlamydia trachomatis antibody using (I) as the antigen. (I) is used for the diagnosis of Chlamydia trachomatis infectious diseases. The method can diagnose Chlamydia trachomatis infectious diseases specifically in a can diagnose Chlamydia trachomatis infectious diseases
                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2000-295780/26.

The nucleic acid is used to diagnose, treat and prevent cancer, immune disorders, inflammation, neurological disorders and disorders of vesicular transport. The present sequence is the motor and disorders of vesicular transport.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding a motor protein which has microtubule stimulated ATPase activity, designated HSKIF16A, for preventing a treating cancer, and neurological and vesicle transport disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       numan; kinesin motor protein; HsKifl6a; motor domain; microtubule-stimulated ATPase activity; adenosine triv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       microtubule-stimulated ATPase activity; adenosine triphosphatase; c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a human kinesin motor protein, HsKif16a, comprising a motor domain and having microtubule-stimulated APPase (adenosine triphosphatase) activity. The protein of the invention and its associated nucleic acid are useful in diagnosis, treatment and prevention of cancer, neurological disorders, disorders of vesicular transport, autoimmune diseases, arthritis, graft rejection, inflammation and proliferation induced after medical procedures. The protein is also used to identify its specific modulators, potentially useful as therapeutic agents. This sequence represents the motor domain of the HsKifl6a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                            25-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                          25-FEB-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Arabidopsis

                                                                  producing chemicals
                                                                          other host cells. The cellulase protein is useful for degrading cellulosic material in textile and paper industries, and also for producing ethanol. Cellulase is also useful for producing fuels an
                                                                                                       The present sequence represents a CelF protein of Orpinomyces sp. PC-2. CelF is a cellulase, which has endoglucanase activity and produces cellobiose from cellotetroase or cellopentoase, and glucose and cellobiose from cellotriose. The CelF polynucleotide is useful for recombinantly expressing CelF mature protein in Escherichia coli or they have tellotriose.

RESULT 28 US-08-006-676B-1

Sequence 1, Application US/08006676B Patent No. 5411865
GENERAL INFORMATION:
APPLICANT: Reed, Steven

```
APPLICANT: Vale, Ronald D.

APPLICANT: Hartman, James J.

APPLICANT: Hartman, James J.

APPLICANT: The Regents of the University of California
ITITE OF INVENTION: Assays for the Detection of Microtubule
ITITE OF INVENTION: Depolymerization Inhibitors

FILE REFERENCE: 185578-000510US

CURRENT APPLICATION NUMBER: US/09/724,884

CURRENT FILING DATE: 2000-11-28

PRIOR APPLICATION NUMBER: 09/291,170

PRIOR FILING DATE: 1999-04-13

NUMBER OF SEQ ID NOS: 16

SOFTWARE: Patentin Ver. 2.0

Sequence 2. Application US/09888655

Patent No. 6521229

GENERAL INFORMATION:
APPLICANT: Jenkins, Mark C.
APPLICANT: Fayer, Ronald
APPLICANT: Trout, James
TITLE OF INVENTION: Cloning and Expression of a DNA Sequence Encoding A 41
Patent No. 6521229
TITLE OF INVENTION: MDA Cryptosporidium parvum Oocyst Wall Protein
FILE REFERENCE: 0046.99
CURRENT APPLICATION NUMBER: US/09/888,655
CURRENT FILING DATE: 2001-06-26
NUMBER OF SEQ ID NOS: 4
SOFTWARE: PatentIN Ver. 2.1
SEQ ID NO 2
LENGTH: 246
TYPE: PRT
ORGANISM: Cryptosporidium parvum
US-09-888-655-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQ ID NO 2
